**Question 6** Review Later

In a computer system, data is transferred between the CPU and peripheral devices through a channel managed by device controllers. To improve data transfer speed and reduce latency, the system incorporates controllers with dedicated high-speed buffers.

Which of the following device controllers is most suitable for this purpose?

Select an option Clear Response

☐ Wireless controller

☐ USB (Universal Serial Bus) controller

☐ SATA (Serial Advanced Technology Attachment) controller

☐ Ethernet controller

**Correct Answer:** SATA (Serial Advanced Technology Attachment) controller

**Explanation:** SATA is designed for high-speed data transfer between storage devices and the computer. Among the given options, a SATA controller is the most appropriate for fast storage data transfer.

**Question 1**  Revisit Later

Assume that you are employed by a company that has recently suffered a security breach in its computer systems. As the IT manager, you are assigned the responsibility of enhancing the company's operating system security. Which property of an operating system will you prioritize in order to achieve this goal? Select the correct answer from the given choices.

Select an option  Clear Response

☐ Access control

☐ User interface

☐ Multitasking

☐ Virtual memory

**Correct Answer:** Access control

**Explanation:** Access control determines who can access which resources and what operations they are allowed to perform. After a security breach, strengthening access control is a key way to improve OS security.

Jane wants to create a slide that illustrates a progression over time using icons, text, and lines. She aims for it to appear visually dynamic without manually animating each step. Which MS PowerPoint feature can help speed up this process?

←

**Select an option**🗑 Clear Response

☐ Use Slide Zoom feature to create dynamic progression slides quickly.

☐ Use SmartArt Process layout and apply "By Paragraph" animation.

☐ Apply the Morph transition across duplicated slides for smooth effect.

☐ Create a custom layout with background images and animation triggers.

→

**Correct Answer:** Apply the Morph transition across duplicated slides for smooth effect.

Explanation: The Morph transition automatically detects object differences between consecutive slides to create smooth, dynamic progression animations without needing to set individual step-by-step animations manually.

**Question 7**  Revisit Later

During a context switch, consider that the operating system saves the state of the currently running process and loads the state of the next process to be executed. Which crucial CPU register, responsible for holding the address of the next instruction to be fetched, must be saved and restored during this operation? Select the correct option from the given choices.

Select an option  Clear Response

☐ Stack Pointer (SP)

☐ General Purpose Register (GPR)

☐ Program Counter (PC)

☐ Instruction Register (IR)

**Correct Answer:** Program Counter (PC)

**Explanation:** The Program Counter stores the address of the next instruction to be fetched/executed. During a context switch, the PC must be saved for the current process and restored when that process resumes.

**Question 5** Revisit Later

Assume a developer writes a program that needs to create a new process and run a different executable file. Which pair of system calls in a UNIX-like OS fulfill this requirement?  
**Select the correct option from the given choices.**

Select an option Clear Response

☐ create() and run()

☐ fork() and exec()

☐ fork() and wait()

☐ spawn() and terminate()

**Correct Answer:** fork() and exec()

**Explanation:**

- fork() creates a new child process.
- exec() replaces the child process's current program with a different executable.

This combination is the standard UNIX approach for creating a process and running another program.

Your marketing lead reports a list of employees from the South region for an annual campaign bonus. However, you're to generate the list dynamically from the dataset.

| Employee ID | Employee Name | Department       | Role      | Join Date  | Region |
|-------------|---------------|------------------|-----------|------------|--------|
| 1001        | Rahul         | Sales            | Manager   | 10-02-2022 | South  |
| 1002        | Anita         | HR               | Executive | 15-03-2021 | North  |
| 1003        | Vikram        | Sales            | Executive | 22-07-2023 | South  |
| 1004        | Priya         | Finance          | Analyst   | 05-01-2022 | East   |
| 1005        | Arjun         | IT               | Engineer  | 18-06-2021 | West   |
| 1006        | Neha          | Sales            | Executive | 30-11-2022 | South  |
| 1007        | Sandeep       | Marketing        | Manager   | 11-09-2021 | South  |
| 1008        | Meera         | Customer Support | Executive | 49-04-2023 | North  |

Assume you are using Excel 365 or later, where dynamic array functions are supported.

**Select an option** Clear Response

☐ =IF(Region="South", B2:H9, "")

☐ =FILTER(B2:H9, H2:H9="South")

☐ =VLOOKUP("South", H2:H9, B2:H9)

☐ =INDEX(B2:H9, MATCH("South", H2:H9, 0))

**Correct Answer:** =FILTER(B2:H9,H2:H9="South")

**Explanation:** FILTER() returns all rows that satisfy a condition. Here, it checks column H (Region) and returns the rows where the region is "South".

**Question 7** Revisit Later

As a computer architect, you are designing the control unit of a CPU. You need to specify how data is moved from the accumulator to the memory.

Which of the following best describes this operation?

Select an option Clear Response

☐ The process of transferring data from the accumulator to memory is called a register transfer.

☐ The process of transferring data from the accumulator to memory is called memory read operation.

☐ The process of transferring data from the accumulator to memory is called a memory write operation.

☐ The process of transferring data from the accumulator to memory is called an instruction fetch.

**Correct Answer:** ( c ) Memory write operation

**Explanation:** When data moves from the CPU/accumulator into memory, the CPU is writing data to memory. Therefore, it is called a memory write operation.

Q8.

The screenshot shows a test interface for Accenture Campus Hiring - Technical 2025 - New Comer. The top bar includes the Accenture logo, the test title, a 'Saved: 0 seconds ago' indicator, a 'Test Time: 00:28:12' timer, and a 'Finish Test' button. Below the top bar, there is a navigation bar with a dropdown menu showing '1. Common Applications and ...', a series of numbered tabs (1-7) with tab 7 selected, and buttons for 'Previous' and 'Next Section'. The main content area is titled 'Question 2' and includes a 'Revisit Later' button. The question text is: 'Which Excel feature allows you to create custom calculations and summaries within a PivotTable?'. To the right of the question is a 'Select an option' section with four radio button options: 'Calculated Fields' (selected), 'Calculated Items', 'Slicers', and 'Grouping'. There are also 'Clear Response' and 'Revisit Later' buttons in this section. Navigation arrows are visible on the left and right sides of the question area.

**Question 2** Revisit Later

Which Excel feature allows you to create custom calculations and summaries within a PivotTable?

**Select an option** Clear Response

- ☒ Calculated Fields
- ☐ Calculated Items
- ☐ Slicers
- ☐ Grouping

**Correct Answer:** Calculated Fields

**Explanation:** A Calculated Field allows you to create a new calculation in a PivotTable using existing fields. It is used for custom calculations and summaries.

**Question 1** Revisit Later

Consider you are a software developer working on a new application for a large corporation. Your application is expected to run on a variety of different computers with varying hardware specifications and operating systems. You have to ensure compatibility and smooth operation on all of these different systems. Which property of an operating system is most important for you to consider? Select the correct answer from the given choices.

**Select an option** Clear Response

☐ User interface

☐ Security

☐ Device management

☐ Resource allocation

**Correct Answer:** Device management

**Explanation:** Device management allows the operating system to communicate with and control different hardware devices. When an application needs to work across computers with different hardware configurations, device management is particularly important.

Q10.

The screenshot shows a test interface for Accenture Campus Hiring - Technical 2025 - New Comer. The top bar includes the Accenture logo, the test title, a 'Saved: 0 seconds ago' indicator, a 'Test Time: 00:41:32' timer, and a 'Finish Test' button. Below the top bar is a navigation bar with a dropdown menu set to '1. Common Applications and ...', a series of numbered tabs (1-7) with tab 4 highlighted, and buttons for 'Previous' and 'Next Section'. The main content area is titled 'Question 4' and includes a 'Revisit Later' bookmark icon. The question text reads: 'You're building a training module in MS PowerPoint and want to restrict navigation to ensure each slide is viewed sequentially with narration. Which setting provides the strictest control?'. To the right of the question is a 'Select an option' section with four radio button choices. A 'Clear Response' link is also present. Navigation arrows are visible on the left and right sides of the question area.

**Question 4** Revisit Later

You're building a training module in MS PowerPoint and want to restrict navigation to ensure each slide is viewed sequentially with narration. Which setting provides the strictest control?

**Select an option** Clear Response

- ☐ Add hyperlinks to the "Next" button and hide "navigation."
- ☐ Disable "click-to-advance" and use "custom shows."
- ☐ Enable "Browsed at a kiosk (full screen)" mode.
- ☐ Use "Loop continuously" with auto-transitions.

**Correct Answer:** Enable "Browsed at a kiosk (full screen)" mode.

**Explanation:** Kiosk mode provides the strictest control over PowerPoint navigation. It is designed for presentations where the viewer should follow a controlled sequence rather than freely navigating through slides.

**Question 3**  Revisit Later

In MS Word, which paragraph formatting setting ensures that a title and its paragraph stay on the same page?

Select an option  Clear Response

☐ Wrap

☐ Keep

☐ Swap

☐ Lock

**Correct Answer:** Keep

**Explanation:** In MS Word, the Keep with next paragraph setting keeps a heading/title together with the paragraph that follows it, preventing the heading from being left alone at the bottom of a page.

**Question 6**  Revisit Later

Suppose you work in a database, a bus where the input-output devices are attached to the computer by wires. In this, the data transfer can take place directly between them the device controller sends messages to the device controller, and the device controller performs the operations.  
**Which device will you choose if these device controllers consist of a built-in cache so that data transfer occurs faster?**

Select an option  Clear Response

☐ Enhanced interface drive electronics

☐ Enhanced integrated drive electronics

☐ Enhanced interface driver electronics

☐ Enhanced integrated hard driver

**Correct Answer:** Enhanced Integrated Drive Electronics (EIDE)

**Explanation:** EIDE is an enhanced version of IDE/ATA used for connecting storage devices. It incorporates controller functionality and supports improved data transfer compared with older IDE implementations.

While using formulas in Excel, the notation "B8 : B10" indicates:

←

→

Select an option

Clear Response

☐ A. all cells from B8 to B10

☐ B. the product of cell B8 and Cell B10

☐ C. cell B8 and cell B10 only

☐ D. cell B only

**Correct Answer:** A. all cells from B8 to B10

**Explanation:** In Excel, the colon : represents a range of cells. Therefore, B8:B10 refers to the cells B8, B9, and B10—all cells from B8 through B10.

Following are two statements given about Font in MS-Word.

**Statement 1:** When you activate the Mini Translator, it will stay active until you deactivate it within the Translation menu.

**Statement 2:** When the Mini Translator is activated, the document will be sent to Microsoft Translator as you type.

Choose the correct answer from the option given below.

←

Select an option

Clear Response

☐ A. Both the statements are correct.

☐ B. Both the statements are incorrect

☐ C. Only statement 2 is correct.

☐ D. Only statement 1 is correct.

→

**Correct Answer:** Option A — Both the statements are correct.

**Explanation:** When the Mini Translator is activated in MS Word, it remains active until it is manually deactivated through the Translation menu. The Mini Translator also uses Microsoft Translator to provide translations while working with text in the document. Therefore, both Statement 1 and Statement 2 are considered correct.

A feature of MS Office that saves the document automatically after certain interval is called \_\_\_\_.

←

Select an option

Clear Response

☐ A. Web Page

☐ B. Explorer

☐ C. FrontPage

☐ D. DreamWeaver

→

**Correct Answer:** Option C — FrontPage

**Explanation:** Microsoft FrontPage was an application in the MS Office family used for creating and managing web pages.

Q16. In the dataset below, what is the result of the following formula? =INDEX(A2:A9, MATCH(MAX(C2:C9), C2:C9, 0))

| Product  | Category    | Unit Price | Units Sold | Discount % | Sale Date  | Region |
|----------|-------------|------------|------------|------------|------------|--------|
| Laptop   | Electronics | 850        | 10         | 5          | 10-01-2023 | North  |
| Monitor  | Electronics | 200        | 25         | 10         | 15-01-2023 | South  |
| Mouse    | Accessories | 25         | 100        | 0          | 01-02-2023 | North  |
| Keyboard | Accessories | 45         | 60         | 0          | 10-02-2023 | East   |
| Printer  | Electronics | 300        | 15         | 15         | 05-03-2023 | West   |
| Tablet   | Electronics | 500        | 20         | 5          | 15-03-2023 | South  |
| Webcam   | Accessories | 50         | 40         | 0          | 01-04-2023 | North  |
| Speaker  | Accessories | 70         | 30         | 10         | 10-04-2023 | East   |

- A. Printer
- B. Laptop
- C. Mouse
- D. Monitor

**Correct answer :** B. Laptop

**Explanation :**

1. MAX(C2:C9) looks at the Unit Price column (C2:C9) and identifies the maximum value, which is 850.
2. MATCH(850, C2:C9, 0) locates the relative position of 850 within the range C2:C9, returning row position 1.
3. INDEX(A2:A9, 1) returns the item at position 1 from the Product column (A2:A9), which is Laptop.

Q17. John is writing a report and needs to insert today's date without typing it manually. Which shortcut in MS Word allows him to do this?

- A. Alt + Shift + D
- B. Ctrl + Shift + T
- C. Ctrl + Alt + D
- D. Shift + F5

**Correct answer :** A. Alt + Shift + D

**Explanation :**

- Alt + Shift + D is the built-in keyboard shortcut in Microsoft Word to insert the current date field into the document.
- By comparison, Alt + Shift + T inserts the current time, and Shift + F5 moves the cursor to the last edit location.

Q18. In MS PowerPoint, a presenter wants to automatically highlight key bullet points one by one after explaining each, without manually animating every bullet. What is the best feature to use?

- A. Apply a delay on each bullet animation.
- B. Use the 'Appear' animation with trigger action.
- C. Use the 'By Paragraph' animation option.
- D. Group bullets and animate them with 'Wipe'.

**Correct answer :** C. Use the 'By Paragraph' animation option.

**Explanation :**

- The 'By Paragraph' (Effect Options) feature allows you to apply a single animation effect (such as an Emphasis or Entrance effect) to an entire text box, causing each bullet point or line of text to appear or highlight sequentially on click or automatically, without having to configure each line separately.

Q19. You are designing the file management subsystem of an operating system. Besides creating, deleting, and manipulating files and directories, which additional function would significantly improve the system's ability to organize and access files efficiently?

- A. Implementing file compression techniques
- B. Managing file permissions and access control
- C. Supporting file encryption for security
- D. Maintaining file backup and recovery mechanisms

**Correct answer :** B. Managing file permissions and access control

**Explanation :**

- Access control and permissions management allow an operating system to structure multi-user environments efficiently, preventing unauthorized modifications, resolving

concurrent access conflicts, and enabling seamless, secure file retrieval across different user privilege levels.

- While compression, encryption, and backup mechanisms are important storage and security functions, access control is fundamental to the core management and structured organization of file operations in an OS.

Q20. Assume a CPU needs to fetch an instruction from the main memory. Which physical component on the motherboard acts as the primary communication pathway for data, addresses, and control signals between the CPU, memory, and I/O devices? Select the correct option from the given choices.

- A. Peripheral Component Interconnect (PCI) slot
- B. System Bus
- C. CPU Register
- D. Northbridge/Southbridge Chipset

**Correct answer :** B. System Bus

**Explanation :**

- The System Bus is the collection of parallel physical wires and pathways (comprising the Data Bus, Address Bus, and Control Bus) that connects the CPU to main memory and other core motherboard components to facilitate the transfer of instructions, data, and control signals.
